OPERAZIONI AVANZATE IP Camera

(Network Camera)

User Manual

IE log-in basic operation

Remark: keys in grey means do not support

Boot

Connect to power, then IPC is auto boot.

Remark: 1. Make sure that the input voltage corresponds with the switch of the DVR power supply. 2. Power supply demands: 220V±10% /50Hz.

Suggest using the UPS to protect the power supply under allowable conditions.

Reboot

Reboot IPC is divided into soft reboot and hard reboot. Soft switch please enter [Devicecfg] > [Advanced] choose [reboot]; Hard reboot, to cut off power and reconnect it to reboot device

Illustrate:

1、Power-off & recover function

If IPC happens with abnormal shut down when it is under recording, after reboot, it will autosave the record info before shutdown and restore to status before shutdown.

2、Change TF card

When change TF card, please cut off power supply firstly.

3、Change battery

IPC is using button cell battery, need regularly check system time, if time is not accurate, then need to change battery. Suggest to change it once a year by professional maintainer and using the same model of battery.

Log-in

When device turns on normally, need to log-in before operation, system will base on the authority of log-in user to provide related function.

Default IP address: 192.168.1.10, subnet mask: 255.255.255.0, gateway: 192.168.1.1

When device ex-fty, there are 3 preset users : admin , guest , default , default password is none, admin is preset as super authority user, guest and default is preset with authority of preview and playback, admin and guest user can modify password but not authority, default is the user default login, can modify authority but not password

Pic: 3.1 Log-in

For safty sake, when firstly log-in, please go to "Account" to modify user name and password, see chapter 4.5.2 account manage).

Preview

After log-in successfully, will come out window of bit rate type as pic 3.2, can choose the main stream or extra stream u want for preview, and also can click at left side of preview page to set it.

Bi	it Rate Type (8
	✓ Main Stream Extra Stream	
	🔽 Auto Prompt	
	OK Cancel	

Pic: 3.2 bit rate type

At preview page, can shows date, time and channel titile.

Setting menu

On preview mode, click **DeviceCfg** at top side , , will come out window as pic:3.3. setting menu function including: Record, Alarm, System, Advanced, Info. Click icon at bottom side

Pic: 3.3 shortcut menu

Record

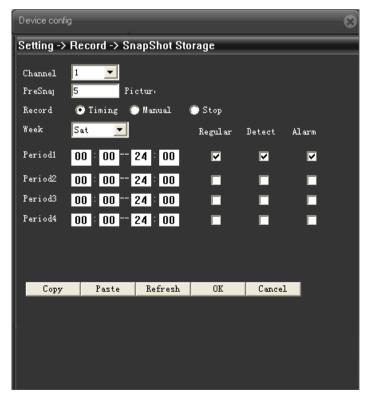

Record function including: device record and snapshot settings.

1. Record setting

Device should install TF card to realize this function.

Device config		_	_	_	_	8

Pic: 3.5 Snapshot setting

Playback

To play the video file in TF card, can click

Playback at u

at upper left side on monitor page, to enter video

playback page.

Remark: Device normal playback, the TF card that used for video storage should be set as read/write or read only (please refer to HDD manage).

Pic 3.6 Playback

Button	Function	Button	Function
	Play		Pause
	Slow-play		Fast-play
ß	Previous frame		Next frame
0	Stop		

[Playback control button] see detail in below chart;

Chart 3.1 playback control button list

Remark: Playback by frame should under the status of playback pause.

[Operate tips] to show the button function when cursor point it

Special feature:

Partial enlargement: when single view full screen playback, can use right button to choose any size of area from the image, click left button in the chosen area, can enlarge this area to playback, double click left button will exit.

3.5.3 Image color

Set image parameter of chosen channel (when single view preview, it should be current channel, when multi-view preview, it should be the channel where the cursor stay), you can enter the page by shortcut menu. Image parameters including: brightness, contrast, saturation, hue, gain, horizontal and vertical sharpness. Also can base on requirement to set different image parameter in different period.

Color Setting		8
Period	☑ 00 : 00 24 : 00	□ 00 : 00 24 : 00
Brightness	50	50
Contrast	50	50

Main Menu

Main menu guideline

Main Menu	Submenu	Function summary
Record	Record	Set record config, record type, record period, etc.

Log

	Snapshot	Set snapshot period, type , etc.					
	Video motion	Set motion detect alarm channel, sensitivity, area, linkage parameters: alarm output, snapshot, recording, PTZ, email sending, ftp upload, etc.					
	Video blind	Set video blind alarm channel, sensitivity, linkage parameters, alarm output, snapshot, recording, PTZ, email sending and ftp upload, etc.					
Alarm	Video lost	Set video lost alarm channel and linkage parameters: alarr output, recording, snapshot, PTZ, Email sending, FT upload, etc.					
	Alarm input	Set alarm input channel and linkage parameters: alarm output, recording, snapshot, PTZ, email sending, FTP upload, etc.					
	Alarm output	Set alarm mode: configuration, manual, stop					
	Abnormal	Storage device not exist, not enough space, access storage device fail, IP conflict, network abnormal alarm					
	General	Set system time, data format, language, hard disk full time operation, machine number, video format, output mode, summertime, stay time					
	Encode	Set encode mode: encode mode, resolution, frame rate, bit rate, image quality, code stream value, I frame interval parameter, video/audio enable.					
System	Network	Set basic net parameter, and DHCP、DNS parameter, auto- gain IP address, network high-speed download, net transmission tactics					
	Net service	ARSP、 Mobile monitor、 UPNP、 FTP、 WiFi、 3G、 alarm center、 RTSP、 PPPOE、 NTP、 Email、 IP authority、 DDNS parameter, etc.					
	GUI display	Set channel title, cover area, time title, channel time overlap and position					
	PTZ Config	Set channel, PTZ protocol, address, baud rate, data bit, stop bit, parity					

	RS485	Set protocol, address, baud rate, data bit, stop bit, parity				
	RS232	Set serial port function, baud rate, data bit, stop bit, parity				
	Camera parameter	Exposure mode, Day/Night mode, Backlight compensation, Auto iris, profile, AE reference, AGC, slow shutter, IR_CUT, Image、Over-turn、anti-flicker etc				
	HDD	Do operation to TF card, such as set read/writ, read only,				
	Manage	redundant, format disk, recover, partition, etc.				
	Account	Modify user, group or password. Add user or group. Delete user or group.				
	Auto					
	maintain	Set auto reboot system, time to auto delete file				
		Restore setting status of : regular, encode, record, alarm,				
Advanced	Default	network, net service, GUI display, serial settings, account manage				
	Import &					
		Config import, Config export, Log export				
	Export					
	Upgrade	To do net upgrade via IE or client software				
	Reboot	IPC soft reboot				
	HDD info	Show ttl space of HDD, type, space left, record time, etc				
Info	Log	Can base on record type and time to search log, can clear the log information				
	Version	Show alarm input output, system version, build date, etc				

Record

Device do operation regarding record, including: record & snapshot.

Record setting

Set IPC parameter, when firstly turn on, system is default with record for 24hours. You can go to [Device config] > [Record] > [Record] to do related setting.

Remark: Device installed with TF card and set it as Read/Write, then it can normally record.(detail please refer to chapter 4.5.1 HDD manage)

Device config]	_	_	_	_	8
Setting ->	Record -> Re	cord	_	_	_	
Channel	1	Redu	ndancy 📕			
Length	60 Mi	n PreR	ecord <mark>5</mark>	Sec

Week	Sat 🗾		Regular	Detect	Alarm	
Period1	00 : 00	24 : 00	✓	✓	✓	
Period2	00 : 00	24 : 00				
Period3	00 : 00	24 00				
Period4	00 : 00	24 00				
Copy	Paste	Refresh	OK	Cance	2 1	

Pic: 4.1 Record setting

[Length] to set the length of each recording file between 1-120min, default is 60min;

[PreRecord] to record 1-30s before motion happens (time length may slight different due to bit

rate)

[Record control] set recode type: timing, manual & stop

Timing: Record according to the set video type (regular, detect and alarm)and time period.

- **Manual:** Click the button and the according channel is recording no matter the channel in any state;
- **Stop**: Click the stop button and the according channel stops recording no matter the channel in any state.

[Period] Set the time section of common recording, The recording will start only in the set range;

[Record type] Set recording type: regular, detect or alarm.

Regular: Perform the regular recording in the set time section. The video file type is "R".

Detect: Trigger the "motion detect", "camera mask" or "video loss" signal. When above

alarm is set as opening recording, the "detection recording" state is on. The video file type is "M".

Alarm:Trigger the external alarm signal in the set time section. When above alarm is set as opening recording, the "detection recording" state is on. The video file type is "A".

Remark: related alarm setting, please refer to chapter 4.3 alarm part.

Snapshot storage

Setup snapshot parameters for different channels.At first time it's set for 24hours snapshot continuously, pls go to Main Menu->Record->Snapshot Storage for appropriate settings.

Remark : Device installed with TF card and set partition, Snapshot should more than 1G, then device can normally take snapshot. (detail please refer to chapter 4.5.1 HDD manage)

Device config						8

Copy	Taste	Nelfesh	OK	Cance.	-		

Pic: 4.2 Snapshot setting

[PreSnapshot] to take picture of 1-30 pcs before recording happens, default is 5 pcs

[Record] Set record type, "Timing", "Manual" and "Stop"

Timing: Realise snapshot according to record type(regular, detect and alarm) and period.

Manual: No matter what is the current status, once choose "manual", it will have snapshot at related channels.

Stop: No matter what is the current status, once choose "stop", it will stop snapshot at related channels.

[Period] Set normal record period, it only startup Snapshot Storage at set period.

[Type] Three types: regular, detect and alarm

【Record type】Three types: regular, detect and alarm

Regular: snapshot at set period

Detect: snapshot at set period when motion detect, video blind and video loss which are

preset for snapshot enable.

Alarm: snapshot at set period when alarm in which is preset for snapshot enable.

Note: for related alarm function, pls refer to chapter 4.3.

Alarm function

Alarm functions include: motion detect,video blind, video loss, alarm input and alarm output, abnormal dealing.

Pic 4.3 Alarm function

Motion detect

When system detects the motion signal that reaches the set sensitivity, the motion detect alarm and the linkage function is enable.

Pic: 4.4 motion detect setting interface

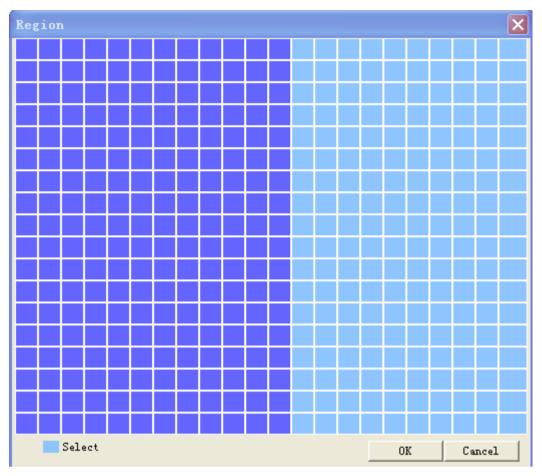

[Enable] Emeans enable motion detect function, enable it firstly then can do related setting.

Lowest	
Lower	
Middle	
Hi gh	
Higher	
Highest	

[Sensitivity] base on sensitivity, can set 6 grades: Highest , the higher of sensitivity to the moving

objects, the easier to sense the motion happens;

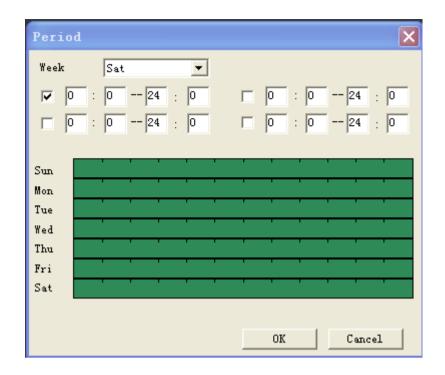

[Region] Click**Setting**, enter the setting region of PAL22X18, light blue region is the guard area of motion detect, dark blue region is the unguard area (show the monitor page), see pic 4.5. press left button of mouse, pull it to set region. (default whole region chosen is monitor area)

Pic: 4.5 region setting

[Period] Trigger the motion detect signal in the set time section, see pic:4.6. You can set according

to week or set uniformly. Each day is divided into four time sections.tick 🗹, mean setting is valid.

[Interval]Only one alarm signal is turned on even there are several motion detect signals in the set interval 0-600s.

[Alarm output] Start the external equipment of corresponding linkage alarm when the motion detect alarm is turned on.;

[Delay] Delay a few moments and stop when the alarm state is turned off. The range is 10~300 seconds.

[Record channel] choose record, when alarm happens, system will trigger record signal of this channel;

Remark:to link record, need to enable motion detect of related period at [record setting]

[Snapshot] choose snapshot, when alarm happens, system will trigger snapshot signal of this channe;

Remark: to link snapshot, need to enable motion detect of related period at [record setting]

[record setting]

[PTZ Linkage] when alarm happens, link the PTZ of related setting channel, see pic:4.7;

Remark: to link PTZ, need to set related parameter at [System] > [PTZ control], set preset point, cruise between points, interval, etc.

PTZ Activ	vation	X
CAM 1	None 🔻 0	
	OK Cancel	

Pic: 4.7 PTZ linkage

[Delay] When alarm is over, recording will last some seconds (10~300sec), then stop.;

[EMAIL sending] tick 🗹, means when alarm happens link email sending to inform user.

Remark: sending email, need to do related setting at [Net service].

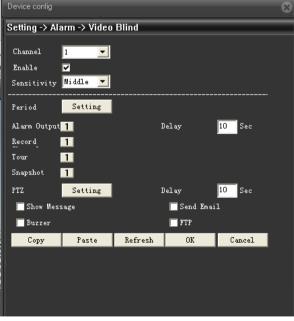

[FTP upload] tick , means when alarm happens, if record or snapshot channel was chosen, the

record file and snapshot image will be uploaded to the appointed position.

Remark: FTP upload, need to do related setting at [Net service].

Video blind

When the video image is influenced by the environment such as bad brightness or reaching the set sensitivy parameter, the camera mask function is turned on and the linkage function is enable.

Pic: 4.8 video blind

Setting detail : refer to chapter 4.3.1 motion detect.

Video lost

When the equipment can not obtain the channel video signal, the video loss alarm is turned on and the linkage function is enable.

Device config					8

Encode Seting

Set video/audio encode parameters, including image parameters of record file, remote monitor, etc. Left part is to set the encode parameter of each separated channel, right part is to set encode parameter of extra stream, dual stream is using one high bit rate stream for local high definition storage, support D1/HD1/CIF/QCIF encode, one low bit rate stream(QCIF encode) for net transmission, in order to maintain local storage and remote net transfer. Dual stream both considering to image quality and transmission quality under the current band bottleneck, and can breakthrough it, base on the bandwidth to flexibly choose stream format, to reach local high definition storage and low stream for net transmission back end.

Remark : Main application of extra stream: to do multi-channel real-time monitor, and mobile monitor when the network if poor.

Device config					-	8

Pic: 4.14 Encode setting

Encode setting

[Compression] Standard H.264MP;

[Resolution] show types of resolution: D1/HD1/CIF/QCIF;

[Frame rate] adjustable, real-time standard is: PAL, 25 fps NTSC, 30 fps;

【Bit rate type】you can choose CBR or VBR, image quality have 6 grades to choose under VBR

type, then you can manual choose the bit rate value under CBR type.

[Image quality] set bit rate value to change the image quality, if supporting facility is available, the larger of bit rate value, the better of image quality.

Bit rate reference span : D1 (512~2560kbps) HD1 (384~2048kbps) CIF (64~1024kbps) , QCIF(64~512kbps)

[Frame interval] you can choose between 2~12s;

[audio/video] the icon was all ticked, means audio & video combine stream

Extra stream setting

Extra stream is used for client side monitor and mobile monitor.

The parameter setting of resolution, frame rate, stream control, bit rate value is the same as individual channel

Network setting

Device config						
Setting -> Syste	Setting -> System -> Network					
Net Card	Wire Netc	ard 💌	🔲 DHC	CP Enable
